

Open your gate with a single phone call

Smart access for gates and doors, without the hassle of remote controls.

- ✓ Quick to install
- ✓ Wireless 4G connection
- ✓ Operate by calling or via the app
- ✓ QR code access without the app
- ✓ Connects with alarm systems and lighting

The online manager

With the Doorcy call module, you manage access to your gate, door, or barrier smarter and more easily. The module controls a device and can also switch other applications, such as a garage door, alarm system, or site lighting. You can open in multiple ways: via the Doorcy app, by calling from an authorized number, or with a QR code on location.

Scenes make it even more practical: you link multiple actions to one moment. For example: gate open and lights on when someone arrives, or alarm off on entry and back on when leaving. You set it up once and it works the same way every day. And because you decide who can use which way of opening, it stays clear and secure, even with multiple users or visitors.

Doorcy's benefits

Calling and opening

Call from an authorized number and open the gate, door, or barrier instantly. No key management and no loose remotes.

QR code

Place a QR code on location. Visitors scan and get access to the linked action. Ideal when you want to give someone access quickly without extra tools.

Connection

The call module works via 4G with a SIM card and is online immediately.

Ethernet (UTP) provides a wired connection alongside 4G for extra certainty. Useful if you want the app to stay stable even when mobile coverage varies.

Scenes

Combine actions that belong together: gate open and lights on, or alarm off on arrival. Set it up once, then it runs automatically and consistently.

Smart setup and integrations

Doorcy brings access, control, and user management together in one system. This makes it easy to expand, connect, and automate, without it becoming complex for the user.

Fits any building or site: Works for business premises, multi tenant buildings, and outdoor areas. From main entrance and back door to parking areas and gates.

Always and everywhere usable: Manage access remotely without being physically present. Useful for changing working hours, suppliers, incidents, or when you manage multiple locations.

Rights and user management tailored to you: Connect the packages that fit your situation: read users, set rights per user, and decide who can open and when. This keeps it clear, even with multiple users and visitors.

The online manager

Doorcy Box

- ✓ Dimensions: 226 mm x 121 mm x 76 mm (L x W x H)
- ✓ Power supply: 12V / 24V 2A
- ✓ Connect up to 80 devices to one box
- ✓ Unlimited number of users
- ✓ 4G with calling functionality
- ✓ Ethernet (UTP)
- ✓ Wiegand input

Smart access management

- ✓ Smart access management via the app
- ✓ Open via the app
- ✓ Open via phone call (authorized number)
- ✓ Open via QR code
- ✓ PIN code possible for visitors without the app

Turn your smartphone into a remote control and manage your building effortlessly from any location. With our intuitive app and effective hardware, you can activate or deactivate devices or scenes with just one press of a button.
